

Risk Summary

Preeclampsia Risk

Low Score: 0.09937414528557639

Macrosomia Risk

Low Score: 0.07752378269884633

Summary: Your risk for both preeclampsia and macrosomia is currently low, which is excellent news! Keep up your healthy habits.

Today's Focus

- Continue your balanced diet and regular post-meal walks.
- Maintain your healthy blood pressure and blood sugar levels.
- Stay aware of your body and report any new or worsening symptoms to your healthcare provider.

Diet Plan (Macrosomia Support)

Goal: Maintain stable blood sugar levels and provide balanced nutrition for you and your baby. Your current diet and glucose levels are excellent!

Breakfast

- Whole-grain oats with berries and a sprinkle of nuts
- Scrambled eggs with spinach and a slice of whole-wheat toast
- Greek yogurt with fruit and a tablespoon of chia seeds

Lunch

- Your current 'Chapati + dal + vegetables' combination is great! Continue to enjoy it.
- Large salad with grilled chicken or chickpeas, mixed greens, and a light vinaigrette
- Brown rice with lentil soup and a side of steamed green beans

Dinner

- Baked fish with quinoa and roasted broccoli
- Whole-wheat pasta with a vegetable-rich tomato sauce and a side salad
- Millet or jowar roti with mixed vegetable curry and a small serving of lean protein

Snacks

- Apple slices with a small spoonful of nut butter
- A handful of almonds or walnuts
- Small bowl of plain yogurt

Avoid / Limit

- Highly processed foods and sugary drinks
- Excessive amounts of fried foods
- Unpasteurized dairy and deli meats (due to general pregnancy safety)

Hydration Tip: Drink plenty of water throughout the day. Aim for 8-12 glasses (2-3 liters) to stay well-hydrated, especially during physical activity.

☐ Activity Plan

Recommended Activity: Continue with your 20 minutes of post-meal walking; it's a fantastic habit!

Post-meal Tip: Walking after meals helps with digestion and keeps your blood sugar levels steady. This is especially beneficial for maintaining your low macrosomia risk.

Safety Note: Listen to your body. Light to moderate exercise, like walking, swimming, or prenatal yoga, is generally safe and beneficial during pregnancy. Always consult your healthcare provider before starting any new exercise routine.

☐ Sleep Plan

Target: 7-9 hours

Tip: You are getting 7.5 hours of sleep, which is excellent! Continue to prioritize a consistent sleep schedule. Create a comfortable, dark, and quiet environment for rest. Using pillows for support can help you find a comfortable sleeping position as your pregnancy progresses.

☐ Blood Pressure Safety (Preeclampsia)

Monitoring Tip: Your current blood pressure (118/76 mmHg) is in a healthy range. Continue to monitor it as advised by your healthcare provider. Regular monitoring helps ensure your well-being.

Red Flags:

- Severe headache that doesn't go away
- Vision changes (e.g., blurry vision, seeing spots, temporary blindness)
- Upper abdominal pain, especially on the right side under your ribs
- Sudden swelling in your face, hands, or feet

What to do: If you experience any of these symptoms, contact your healthcare provider immediately. Early communication is key to managing your health.

☐ Glucose Safety (Macrosomia)

Monitoring Tip: Your fasting glucose (86 mg/dL) and 1-hour postprandial glucose (124 mg/dL) are well within healthy limits. This shows great management of your blood sugar! Keep tracking as advised.

Food Log Comment: Your reported food log ('Chapati + dal + vegetables') is a balanced meal choice that supports healthy blood sugar control. Keep choosing whole grains and plenty of vegetables.

Simple Swap Suggestions:

- Consider using whole-wheat chapati or adding a variety of whole grains like brown rice or quinoa to your diet.
- Incorporate more fibrous vegetables and lean proteins into your meals to further support stable blood sugar.

☐ Daily Checklist

- Enjoy your healthy, balanced meals and snacks.
- Take your 20-minute post-meal walks.
- Drink plenty of water throughout the day.
- Aim for 7-9 hours of quality sleep.
- Monitor for any new or worsening symptoms and report them to your healthcare provider.

☐ Next Steps

- Continue with your routine scheduled appointments.
- Keep up your positive lifestyle habits, including your balanced diet and regular walks.
- Stay in touch with your healthcare provider for any questions or concerns.
