

Risk Summary

Preeclampsia Risk

Low Score: 0.09937414528557639

Macrosomia Risk

Low Score: 0.07752378269884633

Summary: Your health data looks good today, and both your preeclampsia and macrosomia risk scores are low. Keep up your healthy habits, including your balanced diet and regular walks.

Today's Focus

- Continue your balanced diet and regular physical activity.
- Monitor for any new symptoms and report them to your healthcare provider.
- Attend your routine prenatal appointments.

Diet Plan (Macrosomia Support)

Goal: Maintain balanced nutrition for a healthy pregnancy and stable blood sugar levels.

Breakfast

- Whole-grain toast with avocado and a boiled egg
- Oatmeal with berries and a handful of nuts
- Smoothie with spinach, banana, and Greek yogurt

Lunch

- Quinoa salad with grilled chicken or chickpeas and mixed vegetables
- Whole-wheat wrap with hummus, plenty of veggies, and lean protein
- Leftover dal and vegetable curry with brown rice

Dinner

- Baked salmon with steamed broccoli and sweet potato
- Lentil soup with a side of whole-grain bread
- Stir-fried tofu with brown rice and colorful vegetables

Snacks

- Apple slices with a tablespoon of peanut butter
- A small handful of almonds and a piece of fruit

Avoid / Limit

- Raw or undercooked meats, fish, and eggs
- Unpasteurized dairy products
- Excessive caffeine and artificial sweeteners
- Highly processed foods and sugary drinks

Hydration Tip: Drink plenty of water throughout the day, aiming for 8-12 glasses, to stay well-hydrated. You can also include herbal teas (check with your doctor) or water infused with fruit.

☐ Activity Plan

Recommended Activity: 20-30 minutes

Post-meal Tip: Keep up your regular 20-minute post-meal walks, as this is a great habit for managing blood sugar and promoting overall well-being. If you feel up to it, you could extend it slightly.

Safety Note: Listen to your body and choose activities that feel comfortable and safe for pregnancy. Always consult your doctor before starting any new exercise routine. Avoid activities with a high risk of falling or abdominal trauma.

☐ Sleep Plan

Target: 7-9 hours

Tip: You are currently getting around 7.5 hours of sleep, which is a good target. Continue to prioritize restful sleep by maintaining a consistent sleep schedule and creating a relaxing bedtime routine.

☐ Blood Pressure Safety (Preeclampsia)

Monitoring Tip: Your blood pressure today is 118/76 mmHg, which is within a healthy range. Continue to monitor your blood pressure as advised by your doctor and attend all prenatal appointments.

Red Flags:

- Severe headache that doesn't go away with pain relief
- Changes in vision, such as blurry vision, flashing lights, or spots
- Severe pain in the upper right side of your abdomen or stomach
- Sudden swelling in your face or hands

What to do: If you experience any of these symptoms, contact your healthcare provider immediately or go to the nearest emergency room.

☐ Glucose Safety (Macrosomia)

Monitoring Tip: Your glucose levels (fasting 86 mg/dL, 1-hour post-meal 124 mg/dL, HbA1c 5.3%) are within normal limits. Continue to choose balanced meals to maintain these healthy levels.

Food Log Comment: Your recent food log of 'Chapati + dal + vegetables' is a good example of a balanced meal providing carbohydrates, protein, and fiber.

Simple Swap Suggestions:

- Swap white rice or pasta for brown rice or whole-wheat pasta to increase fiber.
- Choose lean proteins like chicken, fish, or lentils instead of processed meats.

☐ Daily Checklist

- Eat balanced meals with plenty of vegetables, lean proteins, and whole grains.
- Drink at least 8-12 glasses of water.
- Take a 20-30 minute walk, especially after meals.
- Aim for 7-9 hours of quality sleep.
- Monitor for any new or concerning symptoms.

☐ Next Steps

- Continue with your regular scheduled prenatal visits.

- Keep tracking your meals, activity, and sleep as advised.
- Reach out to your healthcare provider with any questions or concerns.
