

Risk Summary

Preeclampsia Risk

Low Score: 0.099

Macrosomia Risk

Low Score: 0.077

Summary: Your current risk assessment for preeclampsia and macrosomia is low, which is great news! Your blood pressure and glucose levels are looking good, and it's wonderful to see you maintaining healthy habits.

Today's Focus

- Maintain healthy blood pressure with consistent self-care.
- Keep blood sugar levels stable with balanced meals and activity.
- Continue your excellent habits of regular walks and good sleep.

Diet Plan (Macrosomia Support)

Goal: Maintain healthy blood sugar levels and provide essential nutrients for you and your baby while enjoying a varied diet.

Breakfast

- Whole-grain chapati with dal and a side of mixed vegetables.
- Oatmeal topped with a handful of berries and nuts.
- Scrambled eggs with spinach and a slice of whole-wheat toast.

Lunch

- Lentil (dal) and vegetable curry with a small portion of brown rice.
- A large salad with lean protein (like grilled chicken or chickpeas) and a light vinaigrette.
- Vegetable soup with a whole-grain roll.

Dinner

- Chapati with a variety of cooked vegetables and a lean protein source like fish or tofu.
- Baked sweet potato with a lentil stew.
- Stir-fried vegetables with lean meat or paneer and a side of quinoa.

Snacks

- A handful of almonds or walnuts.
- Plain yogurt with a few apple slices.
- A small fruit like an orange or pear.

Avoid / Limit

- Highly processed foods, sugary drinks, and excessive sweets.
- Foods high in unhealthy fats like deep-fried items.
- Raw or undercooked meats, eggs, and unpasteurized dairy products.

Hydration Tip: Drink at least 8-10 glasses of water daily to support your body and baby, and to stay well-hydrated throughout your pregnancy.

☐ Activity Plan

Recommended Activity: Aim for 20-30 minutes of moderate-intensity walking most days of the week.

Post-meal Tip: Great job with your 20-minute post-meal walks! Continuing this habit helps manage your blood sugar levels and aids digestion effectively.

Safety Note: Always listen to your body and consult your doctor before starting any new exercise routine. Avoid activities with a high risk of falling or abdominal trauma during pregnancy.

☐ Sleep Plan

Target: 7-9 hours

Tip: You're getting about 7.5 hours of sleep, which is excellent! Continue to prioritize quality sleep. Establish a relaxing bedtime routine to help you wind down and ensure consistent rest.

☐ Blood Pressure Safety (Preeclampsia)

Monitoring Tip: Your blood pressure is currently 118/76 mmHg, which is within a healthy range. Continue monitoring it regularly as advised by your healthcare provider.

Red Flags:

- Severe headache that doesn't go away with rest or pain relief.
- Changes in vision (blurry vision, seeing spots, flashing lights).
- Sudden swelling in your face or hands, or swelling that doesn't go down.
- Severe pain in your upper belly (abdomen), especially under your ribs on the right side.

What to do: If you experience any of these symptoms, contact your doctor or go to the nearest emergency room immediately.

☐ Glucose Safety (Macrosomia)

Monitoring Tip: Your glucose levels (Fasting: 86 mg/dL, 1-hr post-meal: 124 mg/dL) and HbA1c (5.3%) are looking very good. Keep up your healthy eating and activity habits to maintain these levels.

Food Log Comment: Your food log shows a balanced meal of Chapati + dal + vegetables, which is an excellent choice for stable blood sugar and good nutrition.

Simple Swap Suggestions:

- Choose whole-grain chapati or brown rice instead of refined white rice to benefit from more fiber.
- Pair fruits with a source of protein or healthy fat, like nuts, to help slow down sugar absorption.

☐ Daily Checklist

- Drink plenty of water throughout the day.
- Eat balanced meals with whole grains, lean protein, and lots of colorful vegetables.
- Take a short walk after your main meals.
- Aim for 7-9 hours of quality sleep each night.
- Monitor for any unusual symptoms like severe headache or vision changes.
- Attend all your regular prenatal appointments.

☐ Next Steps

- Continue with your regularly scheduled obstetric visit for ongoing monitoring.

- Keep tracking your meals, activities, and how you're feeling.
- Contact your doctor if you have any concerns or new symptoms.
