

Risk Summary

Preeclampsia Risk

Low Score: 0.09937414528557639

Macrosomia Risk

Low Score: 0.07752378269884633

Summary: Your health data looks good, and both your preeclampsia and macrosomia risks are currently low. Your pregnancy is progressing well at 28 weeks.

Today's Focus

- Continue your healthy eating and exercise habits.
- Monitor your well-being and any changes in your body.
- Stay hydrated and get adequate rest.

Diet Plan (Macrosomia Support)

Goal: Maintain steady blood sugar levels and provide balanced nutrition for you and your baby.

Breakfast

- Whole-grain oatmeal with berries and a handful of nuts
- Scrambled eggs with spinach and whole-wheat toast
- Poha with mixed vegetables and a small side of yogurt

Lunch

- Brown rice with dal and a generous portion of mixed vegetable curry
- Quinoa salad with grilled chicken or paneer and plenty of greens
- Whole-wheat wrap with hummus, sliced vegetables, and lean protein

Dinner

- Baked fish or tofu with roasted sweet potatoes and green beans
- Lentil soup with a side of whole-grain bread and a mixed salad
- Chapati with a variety of vegetable dishes and a small serving of curd

Snacks

- Apple slices with a tablespoon of peanut butter
- A handful of almonds and walnuts
- Plain yogurt with a few berries

Avoid / Limit

- Sugary drinks and excessive sweets
- Highly processed foods and deep-fried items
- Raw or undercooked meats, fish, and eggs

Hydration Tip: Aim to drink 8-12 glasses of water throughout the day to stay well-hydrated, especially with your physical activity.

☐ Activity Plan

Recommended Activity: You are currently doing 20-minute post-meal walks, which is excellent. Continue this habit, and if comfortable, you can gradually aim for 30 minutes of moderate activity most days.

Post-meal Tip: Keep up the great work with your post-meal walks! They are incredibly beneficial for managing blood sugar levels and improving digestion.

Safety Note: Listen to your body, stay hydrated, and avoid activities that involve a risk of falling or abdominal trauma. Consult your doctor if you have any concerns about specific exercises.

☐ Sleep Plan

Target: 7-9 hours

Tip: You're getting about 7.5 hours of sleep, which is good! To maintain this, try to establish a consistent bedtime routine, keep your bedroom dark and cool, and avoid screens before bed.

☐ Blood Pressure Safety (Preeclampsia)

Monitoring Tip: Your blood pressure reading of 118/76 mmHg is currently within a healthy range. Continue monitoring it as advised by your healthcare provider.

Red Flags:

- Severe headache that doesn't go away with over-the-counter pain relief
- Changes in vision (e.g., blurry vision, seeing spots or flashing lights)
- New or worsening swelling in your face or hands
- Upper abdominal pain, especially on your right side below the ribs

What to do: If you experience any of these symptoms, contact your healthcare provider immediately or seek emergency medical attention.

☐ Glucose Safety (Macrosomia)

Monitoring Tip: Your fasting glucose (86), postprandial 1hr glucose (124), and HbA1c (5.3) are all within healthy limits, which is fantastic! Continue to make healthy food choices.

Food Log Comment: Your recent food log of 'Chapati + dal + vegetables' indicates a balanced and healthy meal choice.

Simple Swap Suggestions:

- Choose whole grains like brown rice, millets, or whole wheat chapati over refined grains.
- Pair carbohydrates with protein and healthy fats to help stabilize blood sugar (e.g., fruit with nuts, whole-grain toast with avocado and egg).

☐ Daily Checklist

- Drink at least 8-12 glasses of water.
- Eat balanced meals with plenty of vegetables, lean protein, and whole grains.
- Take a post-meal walk (aim for 20-30 minutes).
- Get 7-9 hours of quality sleep.
- Monitor for any new or concerning symptoms.

☐ Next Steps

- Continue to log your health data and well-being.

- We will check in with you again around March 26, 2026.
