

Risk Summary

Preeclampsia Risk

Low

Score: 0.099

Macrosomia Risk

Low

Score: 0.078

Summary: Your current health indicators are looking good, and both your preeclampsia and macrosomia risks are low. Keep up with your healthy eating, physical activity like your post-meal walks, and good sleep habits. Continue your routine prenatal care as advised by your doctor.

Today's Focus

- Maintain your healthy eating and balanced portions.
- Stay active with regular, gentle exercise.
- Prioritize good quality sleep.
- Monitor for any changes in your body.

Diet Plan (Macrosomia Support)

Goal: Continue your balanced diet for steady energy and healthy growth for your baby.

Breakfast

- Whole wheat chapati with vegetable curry and a side of plain yogurt.
- Oatmeal with fruits (berries, apple slices) and nuts.
- Scrambled eggs with whole-grain toast and spinach.

Lunch

- Brown rice or whole wheat chapati with dal, mixed vegetables, and a small portion of lean protein (chicken/fish/paneer).
- Large salad with grilled chicken/paneer, chickpeas, and a light vinaigrette.
- Quinoa salad with roasted vegetables and a hard-boiled egg.

Dinner

- Fish/chicken/lentil stew with plenty of non-starchy vegetables.
- Paneer (cottage cheese) or tofu stir-fry with brown rice.
- Whole wheat pasta with a vegetable-rich tomato sauce and a side salad.

Snacks

- A handful of nuts and seeds.
- Plain yogurt with a few berries.
- Apple slices with a tablespoon of peanut butter.
- Cucumber or carrot sticks with hummus.

Avoid / Limit

- Excessive sugary drinks and processed snacks.
- Raw or undercooked meats, fish, and eggs.
- Unpasteurized dairy products.

- Certain high-mercury fish (e.g., shark, swordfish).

☐ **Hydration Tip:** Drink plenty of water throughout the day, aiming for 8-12 glasses, and even more if you're active.

☐ Activity Plan

Recommended Activity: Continue your 20-minute post-meal walks, and aim for at least 30 minutes of moderate activity most days.

Post-meal Tip: Your 20-minute post-meal walks are excellent! This helps manage blood sugar and promotes digestion.

Safety Note: Listen to your body. Safe activities include brisk walking, swimming, prenatal yoga, and light strength training. Avoid activities with a risk of falling or abdominal trauma.

☐ Sleep Plan

Target: 7-9 hours

Tip: You're currently getting 7.5 hours of sleep, which is great! Continue to prioritize consistent sleep to support your body and baby's health. Try to establish a relaxing bedtime routine.

☐ Blood Pressure Safety (Preeclampsia)

Monitoring Tip: Your blood pressure is currently 118/76 mmHg, which is healthy. Continue to monitor it as advised by your doctor at your prenatal visits.

Red Flags:

- Severe headache that doesn't go away.
- Vision changes (blurry vision, seeing spots or flashing lights).
- Upper abdominal pain (especially on the right side, under your ribs).
- Sudden swelling in your face or hands.

What to do: If you experience any of these symptoms, contact your doctor immediately. Do not wait.

☐ Glucose Safety (Macrosomia)

Monitoring Tip: Your glucose levels (Fasting: 86 mg/dL, 1hr Post-meal: 124 mg/dL, HbA1c: 5.3%) are well within healthy ranges. Continue to choose balanced meals and stay active to maintain these levels.

Food Log Comment: Your recent food log of 'Chapati + dal + vegetables' is a good example of a balanced meal providing carbohydrates, protein, and fiber.

Simple Swap Suggestions:

- Choose whole-grain chapatis or brown rice over refined grains for more fiber.
- Pair fruits with a source of protein or healthy fat (e.g., apple slices with a handful of almonds) to stabilize blood sugar.

☐ Daily Checklist

- Eat balanced meals with plenty of vegetables, lean protein, and whole grains.
- Take your 20-minute post-meal walks.
- Drink enough water throughout the day.
- Aim for 7-9 hours of quality sleep.
- Listen to your body and rest when needed.
- Attend all your routine prenatal appointments.

▢ Next Steps

- Continue your routine prenatal care as advised by your doctor.
