

Risk Summary

Preeclampsia Risk

Low Score: 0.09937414528557639

Macrosomia Risk

Low Score: 0.07752378269884633

Summary: Your health data and risk scores look good at 28 weeks gestation. Keep up the great work with your healthy lifestyle habits, including regular walks and balanced meals. We will continue to monitor your progress closely.

Today's Focus

- Maintain balanced nutrition
- Stay active with regular walks
- Ensure adequate sleep
- Monitor your overall well-being

Diet Plan (Macrosomia Support)

Goal: Maintain balanced nutrition for healthy pregnancy and baby development, supporting your healthy glucose levels.

Breakfast

- Whole-grain poha or upma with lots of vegetables
- Oats with nuts and fruit
- Scrambled eggs with whole-wheat toast and a side of spinach

Lunch

- Chapati + dal + mixed vegetables (as logged, great choice!)
- Brown rice with chicken/paneer curry and a large salad
- Lentil soup with whole-grain bread and steamed green beans

Dinner

- Baked fish or chicken with roasted sweet potatoes and broccoli
- Quinoa vegetable pilaf with a side of raita
- Whole-wheat pasta with tomato sauce and lean protein

Snacks

- A piece of fruit (apple, pear, orange)
- A handful of almonds or walnuts
- Yogurt with berries

Avoid / Limit

- Highly processed foods and sugary drinks
- Excessive caffeine
- Raw or undercooked meats, fish, and eggs

Hydration Tip: Drink 8-10 glasses of water daily to stay well-hydrated, especially important during pregnancy.

☐ Activity Plan

Recommended Activity: Aim for 20-30 minutes of moderate walking most days of the week.

Post-meal Tip: Continue your great habit of a 20-minute post-meal walk; it's excellent for digestion and blood sugar management.

Safety Note: Listen to your body, stay hydrated, and avoid activities that put you at risk of falling or abdominal trauma. Always consult your doctor before starting any new exercise routine.

☐ Sleep Plan

Target: 7-9 hours

Tip: You're getting about 7.5 hours of sleep, which is within the healthy range. Try to maintain a consistent sleep schedule, even on weekends, to support your well-being.

☐ Blood Pressure Safety (Preeclampsia)

Monitoring Tip: Your blood pressure is 118/76 mmHg, which is healthy. Continue monitoring your blood pressure as advised by your doctor during your regular prenatal visits.

Red Flags:

- Severe headache that won't go away
- Changes in your vision (blurry vision, flashing lights, seeing spots)
- Severe pain in your upper abdomen or shoulder
- Sudden swelling in your face, hands, or feet

What to do: Contact your doctor immediately if you experience any of these symptoms.

☐ Glucose Safety (Macrosomia)

Monitoring Tip: Your fasting glucose (86 mg/dL), 1-hour postprandial glucose (124 mg/dL), and HbA1c (5.3%) are currently within a healthy range. Keep up your healthy eating and activity habits.

Food Log Comment: Your food log shows a balanced meal of Chapati + dal + vegetables, which is a great choice for stable blood sugar.

Simple Swap Suggestions:

- Choose whole-grain chapatis or brown rice instead of refined grains for sustained energy.
- Incorporate more non-starchy vegetables like leafy greens, broccoli, and bell peppers into your meals.

☐ Daily Checklist

- Enjoy balanced meals and healthy snacks
- Go for your daily walk (aim for 20-30 minutes)
- Drink plenty of water
- Get 7-9 hours of quality sleep
- Monitor for any concerning symptoms and report them to your doctor

☐ Next Steps

- Continue with your regular scheduled prenatal visit.
- Maintain open communication with your healthcare provider regarding any questions or concerns.
