

Risk Summary

Preeclampsia Risk

Low Score: 0.09937414528557639

Macrosomia Risk

Low Score: 0.07752378269884633

Summary: Your current health indicators show a low risk for both preeclampsia and macrosomia, which is great news! Your blood pressure and glucose levels are well within healthy ranges, and you're maintaining a good lifestyle. Continue with your healthy habits, including your post-meal walks and balanced diet. We will keep monitoring your progress at your routine appointments.

Today's Focus

- Celebrate your healthy progress!
- Maintain your balanced nutrition and hydration.
- Continue with your regular physical activity, especially post-meal walks.
- Prioritize restful sleep each night.

Diet Plan (Macrosomia Support)

Goal: Maintain balanced nutrition with whole foods to support a healthy pregnancy and stable blood sugar levels.

Breakfast

- Whole-grain oatmeal with berries and a sprinkle of nuts
- Scrambled eggs with spinach and whole-wheat toast
- Greek yogurt with fruit and a tablespoon of seeds

Lunch

- Lentil (dal) soup with a side of mixed vegetable salad and whole-wheat chapati
- Quinoa salad with roasted vegetables and chickpeas
- Brown rice with lean chicken/fish curry and mixed greens

Dinner

- Baked fish or grilled chicken with a large serving of steamed vegetables (e.g., broccoli, green beans)
- Mixed vegetable stir-fry with tofu/paneer and a small portion of brown rice
- Whole-wheat pasta with vegetable marinara sauce and a side salad

Snacks

- Apple slices with a small handful of almonds
- A small bowl of fresh fruit (e.g., guava, pear)
- Roasted chana (chickpeas)

Avoid / Limit

- Highly processed foods and sugary drinks
- Excessive amounts of fried foods
- Unpasteurized dairy and raw or undercooked meats/fish

☐ **Hydration Tip:** Drink plenty of water throughout the day, aiming for 8-12 glasses. Carry a water bottle as a reminder.

☐ Activity Plan

Recommended Activity: Aim for at least 20 minutes of moderate activity daily, like your post-meal walks.

Post-meal Tip: Keep up your excellent habit of post-meal walks! This is wonderful for digestion and blood sugar control. Consider extending to 30 minutes if you feel comfortable.

Safety Note: Listen to your body. Avoid activities that put you at risk of falling or abdominal trauma. If you feel any discomfort, stop and rest. Always consult your healthcare provider before starting any new exercise routine.

☐ Sleep Plan

Target: 7-9 hours

Tip: You're doing great with 7.5 hours of sleep! Continue to prioritize your sleep by maintaining a consistent bedtime routine. Create a dark, quiet, and cool environment for optimal rest.

☐ Blood Pressure Safety (Preeclampsia)

Monitoring Tip: Your blood pressure is excellent at 118/76 mmHg. Continue to monitor it as advised by your doctor at your routine appointments.

Red Flags:

- Severe headache that doesn't go away with pain medication
- Changes in vision (blurry vision, seeing spots or flashing lights)
- Severe pain in your upper abdomen or shoulder
- Sudden swelling in your face, hands, or feet

What to do: If you experience any of these red flags, contact your healthcare provider immediately or seek emergency medical care.

☐ Glucose Safety (Macrosomia)

Monitoring Tip: Your glucose levels (Fasting 86 mg/dL, 1hr postprandial 124 mg/dL) and HbA1c (5.3%) are well within healthy ranges, which is fantastic! Continue your healthy eating habits.

Food Log Comment: Your meal of 'Chapati + dal + vegetables' is a great example of a balanced, healthy choice! Keep incorporating similar nutritious options.

Simple Swap Suggestions:

- Swap white rice/bread for brown rice/whole-wheat chapati for sustained energy.
- Choose fresh fruits over fruit juices to get more fiber.

☐ Daily Checklist

- ✓ Eat balanced meals with whole grains, lean protein, and plenty of vegetables.
- ✓ Drink plenty of water throughout the day.
- ✓ Take your post-meal walks (e.g., 20+ minutes).
- ✓ Aim for 7-9 hours of quality sleep.
- ✓ Pay attention to your body and report any unusual symptoms to your doctor.

☐ Next Steps

- Continue with your healthy habits and routine monitoring.
- Your next monitoring is scheduled for 2026-04-15.
